GDM Gluing Dot Matrix

Glue gun arrays for custom shape gluing

Glue Dot Matrix

If universal glue application is required, KAS intensively uses GDM. GDM stands for "Glue Dot Matrix" and is an arrangement of several glue guns in one block. GDM can consist of minimum 2 glue guns and maximum 100 glue guns.

GDM can be arranged in one single line or as double line or as three lines. Placing glue guns in double line or three lines allows reducing the transversal dot to dot space up to 5.3mm while a single line GDM has a minimum transversal dot space of 16mm. This way, even trickle-tight glue applications can be created. Standard GDM blocks have a fixed transversal dot to dot raster. But customer specific GDM can fulfill nearly all customer requirements.
